

SUSTAINABILITY FORUM PH 2022

The Philippines' private sector has been pursuing climate action individually, acting in silos. The Sustainability Forum PH 2022:

United for Climate hopes to create a national and unified climate vision for the business ecosystem. This will encompass business owners and partner suppliers, policymakers, and civil society organizations.

Gather with our peers in the private and public sectors and form a consensus on the apt and practical approach to climate change, through balancing mitigation and adaptation.

Build a community of leaders committed to driving ambitious climate action in the Philippines by inviting core members to the creation of a Climate Alliance.

Have a Climate Alliance participation at COP28 in UAE or COP29 in Australia – bringing climate resiliency and adaptation to the forefront of our country's climate advocacy.

Our vision is that the summit will launch sector-wide discussions on innovative climate strategies across Philippine industries. The next steps will be to agree on a way forward and a timeline, and how all can progress towards a unified, private sector-led climate action plan that is context-specific and adaptive – truly Filipino.
